ZEE TECH FOUNDATION

Community-Built Digital Village Hub

Homepage Content & Slider Copy

Connecting People. Building Skills. Creating Opportunities.

A proposed initiative under Zee Tech Foundation's "No One Left Offline" vision

1. Homepage Hero Slider

Recommended placement: at the top of the homepage, directly below the navigation bar. The slider should use strong project photography or architectural visuals, concise text, clear calls to action, and manual navigation controls.

SLIDE 1 — OUR VISION

No One Left Behind.
No One Left Offline.

Bringing internet connectivity, digital skills, STEM education, and innovation closer to rural and underserved communities in Nigeria.

- Primary button: Explore Our Model
- Secondary button: Partner With Us

Visual direction: the proposed Digital Village Hub or a wide view of the community-centred facility.

SLIDE 2 — DIGITAL OPPORTUNITY

Bringing Digital Opportunity Closer.

Our proposed hub brings together a computer learning space, internet connectivity, solar power, and community areas for learning and collaboration.

- Primary button: Discover the Hub
- Secondary button: Why It Matters

Visual direction: learners using computers or participating in a digital skills session.

SLIDE 3 — COMMUNITY OWNERSHIP

Local Ownership. Lasting Opportunity.

We aim to work with communities to shape the hub, build local capacity, and plan for responsible long-term operation.

- Primary button: See How It Works
- Secondary button: Explore Our Hubs

Visual direction: community members collaborating in a learning space or outdoor pavilion.

SLIDE 4 — PARTNERSHIPS

Help Build a More Connected Future.

Join us to explore support for connectivity, solar energy, computers, digital skills programmes, inclusion, and sustainability.

- Primary button: Partner With Us
- Secondary button: Contact Zee Tech Foundation

Visual direction: solar panels, digital equipment, and the hub facility.

Slider behaviour

- Automatically advance every 7 seconds.

- Provide previous and next arrows.
- Show four slide indicators so visitors can jump to a specific slide.
- Work on desktop and mobile screens.
- Pause rotation while visitors hover over the slider or focus its controls.
- Use accessible labels and respect reduced-motion preferences.

2. Homepage Content Below the Slider

A. Introductory statement — The challenge

Digital opportunity should not depend on where you live.

Many rural and underserved communities face barriers to reliable connectivity, devices, electricity, safe learning spaces, and practical digital skills. The hub aims to bring these elements together in a shared local space.

B. Introducing the hub

A Digital Hub Built With the Community

The Community-Built Digital Village Hub is a proposed community-centred digital learning and innovation space designed to bring connectivity and digital opportunities closer to underserved communities.

The concept combines a solar-powered main building, a computer laboratory, internet connectivity, and open-air community huts for learning, collaboration, and interaction.

More than a physical facility, the hub is intended to support digital literacy, STEM education, teacher training, online safety, mentorship, and entrepreneurship.

Our approach places community participation at the centre of planning, development, and long-term sustainability.

C. What the hub aims to offer

Connectivity, Skills, Safety, and Opportunity

Internet connectivity: Access to online information, digital services, educational resources, and learning opportunities.

Solar-powered infrastructure: A proposed renewable-energy system to support computers, networking equipment, and hub operations.

Digital skills and STEM education: Practical learning for students, teachers, young people, and community members.

Online safety and digital citizenship: Promoting safer, responsible, and informed use of digital technologies.

Innovation and entrepreneurship: Opportunities for mentorship, collaboration, creative problem-solving, and enterprise skills.

Inclusive community learning: Supporting opportunities for girls, young women, people with disabilities, and underserved groups.

D. Proposed hub design

A Shared Space for Learning, Connection, and Innovation

The concept note proposes a hub on a 30 m × 40 m site, featuring a 6 m × 8 m main building.

The proposed design includes a computer laboratory planned around 20 learning seats, a store and equipment area, a small office, rooftop solar panels, internet connectivity and Wi-Fi, and three open-air huts for community interaction and collaboration.

The design is intended as a starting point for a community-built facility using locally appropriate materials, skills, and participation. Final construction specifications, costs, and accessibility requirements will be validated before implementation.

E. Our approach

Built With the Community. Designed for Long-Term Impact.

1. Community engagement — Understand local needs and identify an appropriate site.
2. Collaborative design — Work with community members to shape the hub and its services.
3. Local participation — Explore locally appropriate materials, community labour, and skilled artisans.
4. Infrastructure installation — Plan for solar power, internet connectivity, computers, and supporting equipment.
5. Training and programming — Develop inclusive digital learning and community activities.
6. Local ownership and sustainability — Establish appropriate arrangements for management, maintenance, and ongoing operations.

F. Expected impact

More Than an Internet Connection

Improved digital access: More opportunities to use internet services and digital learning resources.

Stronger digital skills: Practical digital and STEM learning for students, teachers, and community members.

Safer online participation: Greater awareness of online safety and responsible digital citizenship.

Inclusive opportunities: More intentional participation by girls, young women, and people with disabilities.

Innovation and entrepreneurship: Opportunities to develop ideas, build skills, and explore enterprise.

A replicable model: Lessons that can inform future hubs in other underserved communities.

These are expected outcomes of the proposed model, not yet verified achievements.

G. Our hubs across Nigeria

A Growing Vision for Digital Inclusion

We aim to develop a model that can be adapted to communities across Nigeria. Our interactive hub map will display verified locations and distinguish operational hubs from proposed sites. Hub locations will be published as they are confirmed.

H. Partners and donors

Help Build a More Connected Future

We welcome conversations with development organisations, philanthropic foundations, government institutions, technology companies, internet service providers, and individual donors interested in community-centred digital inclusion.

Support could help advance construction and infrastructure, solar power and connectivity, computers and digital learning resources, training and educational programmes, accessibility and inclusive participation, and maintenance and sustainability.

I. Final call to action

Let’s Build Digital Opportunity Together.

Join Zee Tech Foundation in exploring a community-centred approach to connectivity, digital learning, and inclusion.

Primary button: Become a Partner
Secondary button: Contact Us

3. Website content notes

- Use the approved project name consistently: Community-Built Digital Village Hub.
- Use the tagline: Connecting People. Building Skills. Creating Opportunities.
- Identify the project as a proposed initiative unless and until the hub is operational.
- Do not publish unsupported statistics or describe expected outcomes as verified achievements.
- Use confirmed contact details and verified hub locations only.
- Use real project or architectural imagery in the slider rather than repeating the logo on every slide.
- Make sure the contact and partnership buttons lead to working pages or forms.
